1 Introduction

L70 is a full featured GPS module with super sensitivity. It is characteristic of low power consumption and compact size. The module supports autonomous GPS C/A, SBAS function (including WAAS and EGNOS) and AGPS (EASY function). It can be used in the positioning, navigation and other industries.

Now L70 supports SDK commands which are developed by Quectel. At present the SDK commands contain \$PQFLP, \$PQBAUD, \$PQ1PPS, \$PQEPE and so on. For more informations please refer to *Quectel_GNSS_SDK_Commands_Manual*.

This document describes the software aspects of L70. L70 supports NMEA 0183 standard commands. MTK NMEA extended packet is supported to control and configure L70 GPS module.

3 MTK NMEA Packet Protocol

This chapter introduces the MTK NMEA packet protocol, which is a set of extension messages of the standard NMEA packet protocol. These messages are used to control and configure L70 GPS module. The following table shows the structure of a MTK NMEA packet.

3.3. Packet Type: 001 PMTK_ACK

Acknowledgement of PMTK command. In order to inform the sender whether the receiver has received the packet, an acknowledge packet PMTK_ACK should return after the receiver receives a packet.

Some commands will cause the GPS module to restart or change the baud rate. There is no PMTK_ACK for those commands as listed below.

- PMTK_CMD_HOT_START
- PMTK_CMD_WARM_START
- PMTK_CMD_COLD_START
- PMTK_CMD_FULL_COLD_START
- PMTK_SET_NMEA_BAUDRATE

Field	Description
\$	Each NMEA message starts with '\$'
PMTK	MTK proprietary message

	'3'=Valid packet, action succeeded
*	End character of data field
Checksum	Hexadecimal checksum
<CR><LF>	Each of message

3.4. Packet Type: 101 PMTK_CMD_HOT_START

This message is used to hot start the GPS module (use all available data in the NV store). Normally hot start means the GPS module was powered down less than 3 hours (RTC must be alive) and its ephemeris

is still valid. As there is no need for downloading ephemeris, it's the fastest startup method.

Data Field:

None

Example:

\$PMTK101*32<CR><LF>

Field	Description
\$	Each NMEA message starts with '\$'
PMTK	MTK proprietary message
Packet Type	101
*	End character of data field
Checksum	Hexadecimal checksum
<CR><LF>	Each of message

3.5. Packet Type: 102 PMTK_CMD_WARM_START

This message is used to warm start the GPS module. Warm start means the GPS module has approximate information of time, position and coarse data on satellite positions. But it needs to download ephemeris until it can get a fix. Using this message will force the GPS warm restarted without using the ephemeris data in NV.

Data Field:

None

Example:

\$PMTK102*31<CR><LF>

Field	Description
\$	Each NMEA message starts with '\$'
PMTK	MTK proprietary message
Packet Type	102
*	End character of data field
Checksum	Hexadecimal checksum

<CR><LF>	Each of message
----------	-----------------

3.6. Packet Type: 103 PMTK_CMD_COLD_START

This message is used to cold start the GPS module. Using this message will force the GPS cold restarted without using any prior location information, including time, position, almanacs and ephemeris data.

Data Field:

None

Example:

\$PMTK103*30<CR><LF>

Field	Description
\$	Each NMEA message starts with '\$'
PMTK	MTK proprietary message
Packet Type	103
*	End character of data field
Checksum	Hexadecimal checksum
<CR><LF>	Each of message

3.7. Packet Type: 104 PMTK_CMD_FULL_COLD_START

This message is essentially a cold restart, but additionally clear system and user configurations at re-start. That is, reset the GPS module to the factory status. Full cold start means the GPS module has no information on last location. It needs to search the full time and frequency space, and also all possible satellite numbers before it can get a fix.

Data Field:

None

Example:

\$PMTK104*37<CR><LF>

Field	Description
\$	Each NMEA message starts with '\$'

PMTK	MTK proprietary message
Packet Type	104
